

MSCC5 CCTV Sewer Inspection Training Course

Course overview

Delivered by a CCTV specialist and industry-recognised trainer, this course follows best-practice specifications laid out in WRC's Manual of Sewer Condition Classification 5th Edition (MSCC5).

The MSCC is used by water industries and other organisations worldwide to classify defects in sewers, and is crucial to the management of investment in over 500,000 km of public sewers and lateral drains in the UK alone.

For the large amounts of CCTV data which must be recorded and stored, it is crucial for individuals to: effectively understand the requirements; identify and classify failures; complete compliant reports; and commission and monitor inspections.

Who can benefit?

This globally-recognised course is for industry professionals working with key aspects of sewer and manhole inspection, assessment, and condition coding, including any business area where these impact on decision making, e.g.,

Training outcomes
This 3-day in-person course will enable attendees to:

Use best practice requirements for sewer CCTV inspection

Correctly identify and classify features and defects in drains and sewers

Correctly complete sewer inspection reports to a recognised international standard

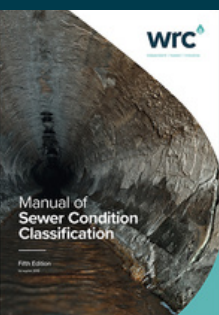

Understand the importance of correctly commissioning and interpreting sewer surveys

Effectively monitor the quality of CCTV inspections

All course attendees will receive a WRC Academy certificate of completion

- OS19X / OS30X certification holders
- CCTV survey teams
- Quality controllers
- Rehabilitation managers
